

SYSTEMS AND METHODS FOR PROVIDING REMOTE INCOMING CALL  
NOTIFICATION FOR CELLULAR PHONES

Abstract of the Disclosure

The present invention provides a remote  
5 notification to a user of a cellular, or mobile, phone  
as the result of a particular activity or any activity  
at all (e.g., an incoming call from a particular  
person, group, or just an incoming call). In one  
embodiment, a sensing device is provided on the  
10 cellular phone that communicates/routes an alert to a  
remote notification device. In one economical  
embodiment, the notification device may have a short  
wire-based communication channel (e.g., roughly 1 foot  
to 5 feet) and only have a single output device (e.g.,  
15 a light-emitting device). Thus, a woman may be able to  
quietly receive notifications of a cell phone event  
when her cell phone is stored in her purse.
